

JAMES J. KILROY

Technical and Quality-Control Resume - 1945

Barracks 14, U.S. Naval Operating Base, Guam, M.I.

c/o Fleet Post Office, San Francisco, California

Telephone: Naval Base Extension 214

CIVILIAN POSITION DESIRED AFTER DISCHARGE

Technical or quality-control work involving communications apparatus, cipher equipment, calculating and tabulating machinery, testing methods, or technical records. Available for civilian employment upon honorable discharge from the United States Navy.

QUALIFICATIONS

- Thorough inspection and testing of electrical, mechanical, and communications equipment.
- Experience with radio, telephone, cipher, plotting, calculating, and punched-card machinery.
- Able to devise repeatable test procedures and visual test patterns.
- Skilled in locating intermittent faults, checking operation at extreme limits, and confirming repairs.
- Prepares clear technical reports and explains equipment operation to supervisors, operators, and repair personnel.

EXPERIENCE

COMMUNICATIONS EQUIPMENT TEST TECHNICIAN

U.S. Naval Operating Base - Guam, Mariana Islands - 1944-1945

- Inspected shore radio and telephone equipment before return to service.
- Prepared repeatable fault reports so repair crews could reproduce intermittent failures.
- Checked operation under weak-signal, overload, and end-of-range conditions.
- Maintained test records and equipment-status sheets for communications supervisors.

CIPHER AND CODING-MACHINE TEST SPECIALIST

Naval Communications Annex - Territory of Hawaii - 1943-1944

- Tested reversible enciphering operations and compared output against known results.
- Used reduced alphabets and short test messages to expose repeating cycles and faults at operating limits.
- Documented equipment failures without recording classified message content.
- Worked with operators and maintenance personnel to confirm repairs.

TABULATING AND PLOTTING MACHINE INSPECTOR

War Production Statistical Office - Boston, Massachusetts - 1941-1943

- Checked punched-card tabulations, numerical plots, scales, labels, and figures falling outside established ranges.
- Devised nested star-shaped plotting patterns whose scale, position, and angle could be varied predictably.
- Used those patterns to reveal plotting errors and give mechanics clear visual evidence of defects.
- Compared figures, formulas, and printed formats when verifying duplicate record sheets.

OFFICE MACHINES AND TELEPHONE SYSTEMS TECHNICIAN

Legal and Commercial Offices - Boston Area - 1938-1941

- Installed standardized deskside equipment and traced telephone and office-machine faults.
- Maintained form-letter, legal-pleading, proof-of-service, and customer follow-up systems.
- Explained equipment operation to clerical personnel in plain language.

MILITARY SERVICE

Enlisted, United States Navy, 1943. Naval communications and equipment-testing assignments in Hawaii and Guam. Available for civilian employment upon honorable discharge.

EDUCATION AND SERVICE TRAINING

UNITED STATES NAVY SERVICE SCHOOLS - 1943

Radio maintenance, communications procedure, electrical fundamentals, and technical record keeping.

EVENING TECHNICAL COURSES - BOSTON, MASSACHUSETTS - 1938-1942

Shop mathematics, radio servicing, office machinery, mechanical drawing, and punched-card methods.
